## Award for "Anexia Drive" at VCÖ Mobility Prize Carinthia 2022

---

"Anexia Drive" convinced expert jury of VCÖ and accepted award as showcase project. The VCÖ Mobility Prize Carinthia was awarded for the 18<sup>th</sup> time this year.

**Klagenfurt, September 12<sup>th</sup>, 2022** – The expert jury of the VCÖ (Austrian Transport Club) awarded the project "Anexia Drive" as a showcase project at this year's VCÖ Mobility Prize Carinthia on September 12<sup>th</sup>, 2022. With the help of AI-supported planning and cloud solutions, "Anexia Drive" makes it possible to plan micro-public transport in a cost-effective, efficient and resource- and eco-friendly way. The software product was submitted in the category "Digitalization in Mobility - Mobility as a Service and Sharing".

"Our intelligent algorithms manage the aggregation of suitable trips and the inclusion of public transport. This improves the mobility offer in rural areas and at off-peak times by covering the first and last mile", says Philipp Hungerländer, Head of Innovation at Anexia. "Thus, usually contradictory goals - reducing CO<sub>2</sub> emissions and increasing mobility - can be achieved at the same time." "Anexia Drive" shows that with the right approaches, climate protection need not be associated only with restrictions. Rather, it can reduce them and provide benefits for mobility, especially in regions that are not as well developed in terms of transport. "For us, "Anexia Drive" has a high value. It proves that with scientific research, cloud solutions and a great team, you can add value to society. At the same time, this product is the start of an entire ecosystem with a variety of smart mobility solutions", says CEO Alexander Windbichler.

### About Anexia

Anexia was founded in 2006 by Alexander Windbichler in Klagenfurt, Austria. The focus of the internationally active Internet services company is on customized and high-quality solutions in the areas of cloud and managed services as well as individual software, app and web development. In addition to its headquarters in Klagenfurt, the company has offices in Vienna, Graz, Munich, Cologne and New York City. Anexia employs about 350 people and serves 100,000 international customers. With around 100 data center locations in 70 countries around the world, the company has a unique selling point in the IT industry.
